8. [Ahrefs Setup Guide](#)

1. Site Overview & Current State

Domain: xeniumdesigns.com

Platform: Static HTML (GitHub Pages via FTP to HostGator)

Pages: 3 (Home, Examples, Contact)

Product: Custom business dashboards — £997 setup + £200/mo retainer

SEO Advantage: Static HTML is the best possible foundation for SEO. No JavaScript rendering, no framework overhead, no plugin bloat. Every page is a fully-formed HTML document that search engines can crawl instantly. This is the same advantage GCodeTutor has — and it ranks #1 for competitive CNC terms.

Current SEO Strengths

- Static HTML — fast, crawlable, no JS dependency
- Mobile responsive (hamburger menu, fluid layout)
- Clean URL structure (index.html, examples.html, contact.html)
- Meta descriptions on all pages
- Google Fonts (Inter) — fast loading
- Chart.js from CDN — no heavy bundles

Current SEO Gaps

- No sitemap.xml
- No robots.txt
- No Open Graph / Twitter Card meta tags
- No Schema.org structured data
- No Google Search Console verified
- No Google Analytics installed
- Thin content (3 pages only)
- No blog or article content
- No backlinks

2. Starter Keyword List

These are the keywords to target when Ahrefs goes live. Grouped by intent and difficulty.

Primary Keywords (High Intent — Money Terms)

Keyword	Intent	Est. Difficulty	Target Page
custom business dashboard	Commercial	Medium	Home
bespoke dashboard development	Commercial	Medium	Home
custom dashboard design UK	Commercial	Low-Medium	Home
business dashboard developer	Commercial	Medium	Home
data dashboard freelancer UK	Commercial	Low	Home
ecommerce dashboard development	Commercial	Low-Medium	Examples
SaaS dashboard design	Commercial	Medium	Examples
marketing dashboard builder	Commercial	Medium	Home

Secondary Keywords (Service-Specific)

Keyword	Intent	Target Page
Shopify analytics dashboard	Commercial	Home
Google Analytics custom dashboard	Commercial	Home
MailerLite analytics dashboard	Commercial	Home
Stripe revenue dashboard	Commercial	Home
Teachable course dashboard	Commercial	Home
Matomo analytics dashboard	Commercial	Home
multi-source data dashboard	Commercial	Home
automated reporting dashboard	Commercial	Home

Long-Tail Keywords (Low Competition — Quick Wins)

Keyword	Intent	Content Type
how much does a custom dashboard cost	Informational	Blog post
custom dashboard vs Power BI	Informational	Blog post
do I need a business dashboard	Informational	Blog post
best dashboard for small business UK	Informational	Blog post
how to track marketing ROI in one dashboard	Informational	Blog post
Shopify store dashboard setup	Informational	Blog post
automate business reporting UK	Informational	Blog post
freelance dashboard developer rates	Informational	Blog post

Informational Keywords (Traffic Builders)

Keyword	Intent	Content Type
what is a business dashboard	Informational	Blog post
KPI dashboard explained	Informational	Blog post
data visualisation best practices	Informational	Blog post
how to choose the right KPIs	Informational	Blog post
single source of truth data	Informational	Blog post
business intelligence for small business	Informational	Blog post

3. On-Page SEO Checklist

Apply this to every page on the site. Use Ahrefs Site Audit to verify after implementation.

Title Tags

Formula: Primary Keyword — Brand Name
Max length: 60 characters

Home: Custom Business Dashboards — Xenium Designs
Examples: Dashboard Examples — See What We Build | Xenium Designs
Contact: Get a Free Dashboard Quote — Xenium Designs

Meta Descriptions

Page	Meta Description (150-160 chars)
Home	We build custom dashboards that pull your business data from anywhere into one clean view. £997 setup, £200/mo retainer. Book a free consultation.
Examples	See example dashboards we have built for e-commerce, course creators, agencies, SaaS businesses, and local services. Interactive demos inside.
Contact	Get a free 15-minute consultation for your custom dashboard. We will look at your data and tell you honestly if a dashboard is right for you.

Heading Hierarchy

Every page must follow strict heading hierarchy:

- **H1:** One per page. Matches the page's primary keyword intent.
- **H2:** Section headings. Each major section gets an H2.
- **H3:** Sub-sections under H2s.
- **H4:** Minor headings, card titles, labels.

Never skip heading levels. H3 must not appear before H2. H4 must not appear before H3. One H1 per page, always.

Image SEO

Every image on the site needs:

- **alt text** — describes the image, includes keyword naturally
- **title attribute** — tooltip text, can be slightly different
- **descriptive filename** — custom-ecommerce-dashboard.png not screenshot1.png
- **loading="lazy"** — on all below-fold images

Internal Linking

Every page should link to at least 2 other pages on the site. Current structure:

Page	Links To
Home	Examples, Contact (nav + CTAs)
Examples	Home, Contact (nav + CTA)
Contact	Home, Examples (nav)

4. Technical SEO

Files to Create

robots.txt

```
User-agent: *
Allow: /
Sitemap: https://xeniumdesigns.com/sitemap.xml
```

sitemap.xml

Generate with Screaming Frog (free up to 500 URLs) or create manually:

URL	Priority	Changefreq
/index.html	1.0	monthly
/examples.html	0.9	monthly
/contact.html	0.8	yearly

Open Graph & Twitter Card Tags

Add to every page:

```
<meta property="og:title" content="Page Title – Xenium Designs">
<meta property="og:description" content="Meta description...">
<meta property="og:image" content="https://xeniumdesigns.com/images/og-image.png">
<meta property="og:url" content="https://xeniumdesigns.com/page.html">
<meta property="og:type" content="website">
<meta name="twitter:card" content="summary_large_image">
<meta name="twitter:title" content="Page Title">
<meta name="twitter:description" content="Meta description...">
<meta name="twitter:image" content="https://xeniumdesigns.com/images/og-image.png">
```

Schema.org Structured Data

Add LocalBusiness schema to the homepage:

```
<script type="application/ld+json">
{
  "@context": "https://schema.org",
  "@type": "ProfessionalService",
  "name": "Xenium Designs",
  "description": "Custom business dashboard development",
  "url": "https://xeniumdesigns.com",
  "priceRange": "££",
  "areaServed": "GB",
  "serviceType": "Dashboard Development"
}
</script>
```

Performance

- Static HTML — already optimal
- Google Fonts (Inter) — preconnected, fast
- Chart.js from CDN — cached by visitors
- Images should be WebP format for smaller file sizes

- Add `loading="lazy"` to all dashboard screenshots

5. Content Strategy

The site currently has 3 pages. To rank for more keywords, you need content. The strategy is the same one that made GCodeTutor rank #1: **hub-and-spoke content**.

The Model

Hub page (Home) targets the main keyword: "custom business dashboard"
Spoke pages (blog posts) target long-tail keywords and link back to the hub
Each spoke article links to the Home page and Examples page

Priority Blog Posts (Write These First)

#	Title	Target Keyword	Word Count
1	How Much Does a Custom Dashboard Cost in the UK?	custom dashboard cost UK	1,500
2	Custom Dashboard vs Power BI: Which Is Right for Your Business?	custom dashboard vs Power BI	1,200
3	Do I Need a Business Dashboard? 5 Signs You Are Ready	do I need a business dashboard	1,000
4	The Best Dashboard Solutions for Small Businesses in 2026	best dashboard small business UK	1,500
5	How to Track All Your Marketing ROI in One Dashboard	track marketing ROI dashboard	1,200
6	Automate Your Business Reporting: A Complete Guide	automate business reporting UK	1,500
7	Shopify Dashboard Setup: What to Track and How	Shopify dashboard setup	1,200
8	How to Choose the Right KPIs for Your Dashboard	choose KPIs dashboard	1,000

Content Rules

- **Every article links to the homepage** (at least once, contextually)
- **Every article links to Examples page** (at least once)
- **Every article has a CTA** — "Get Your Free Consultation"
- **Content is evergreen** — no dates, no news, no time-sensitive claims
- **Written for humans first**, search engines second
- **Each article targets one primary keyword** and 2-3 secondary keywords

6. Local & UK SEO

Google Business Profile

Create a Google Business Profile for Xenium Designs:

- Category: "Website designer" or "Software company"
- Service area: United Kingdom
- Add photos of dashboard examples
- Get reviews from early clients

UK-Specific Keywords to Add

Keyword	Why
dashboard developer London	London = highest search volume UK city
dashboard developer Manchester	Major UK tech hub
data visualisation company UK	UK-wide targeting
business intelligence freelancer UK	Targets the freelance buyer
custom reporting solution UK	Alternative phrasing

Tip: When Ahrefs is live, use the "Keyword Explorer" to check actual search volumes for these UK terms. Focus on keywords with 50-500 monthly searches and low KD (keyword difficulty under 20).

7. Tracking & Measurement

Essential Tools to Set Up

Tool	Purpose	Priority
Google Search Console	Track rankings, indexation, clicks	Day 1
Google Analytics 4	Traffic sources, user behaviour	Day 1
Ahrefs	Keyword research, backlinks, competitor analysis	When available
Screaming Frog	Technical SEO audit, sitemap generation	Week 1

Key Metrics to Track

- **Organic traffic** — total visits from search engines
- **Keyword rankings** — position for target keywords
- **Click-through rate (CTR)** — impressions vs clicks in search results
- **Backlinks** — number and quality of sites linking to you
- **Domain Rating (DR)** — Ahrefs authority score
- **Conversion rate** — contact form submissions / total visitors

Monthly SEO Routine

Task	Frequency
Check Google Search Console for errors	Weekly
Review keyword rankings in Ahrefs	Weekly
Publish 1 blog post	Weekly
Check for broken links (Screaming Frog)	Monthly
Review competitor backlinks	Monthly
Update sitemap if new pages added	Monthly

8. Ahrefs Setup Guide

When Ahrefs is live, here is exactly what to do first.

Day 1: Setup

1. Add xeniumdesigns.com as a project in Ahrefs
2. Verify via Google Search Console (easiest method)
3. Run a full Site Audit (fix any errors found)
4. Run a Site Explorer overview — note current DR, backlinks, organic traffic

Week 1: Keyword Research

1. Go to **Keywords Explorer**
2. Enter each keyword from Section 2 of this guide
3. Check actual search volume and keyword difficulty
4. Sort by "Low KD + High Volume" for quick wins
5. Export the keyword list to CSV
6. Use the "SERP overview" to see who currently ranks

Week 1: Competitor Analysis

1. Go to **Site Explorer**
2. Enter competitor domains (navspace.dev, cloudswitched.com, yehonatandev.com)
3. Check their top organic keywords
4. Check their backlink sources
5. Find keywords they rank for that you don't target yet

Ongoing: Link Building

- **Guest posts** — write for UK business blogs, mention your dashboard service
- **HARO / Connectively** — respond to journalist queries about data/business dashboards
- **Directory listings** — Clutch, Sortlist, DesignRush (UK business directories)
- **Client backlinks** — ask clients to link to you from their "about" or "tools we use" page
- **Content links** — publish helpful blog posts that naturally attract links

Target: Get to DR 20+ within 6 months. This is realistic with consistent content and 10-20 quality backlinks. At DR 20, you will start ranking for low-competition long-tail keywords.
